

 For churches paying for church-management software

Everything your church software does. Without the invoice.

Groups, rotas, giving, safeguarding, the calendar — the whole day-to-day back office of a church. Private, self-hosted, and free.

— THE PROBLEM

You're renting your church's back office.

THE BILL GROWS WITH THE BLESSING

Priced by the head.

Church-management software charges by how many people you have. So the more people God adds, the more you pay — every month, every year, with no end in sight.

HELD ON SOMEONE ELSE'S CLOUD

Your people, their servers.

Names, giving history, pastoral notes, children's records — all sitting on a vendor's platform, under their terms, their price changes, and their idea of privacy.

A good tool — but you pay more each year to look after the people you were **given.**

— LIKE FOR LIKE

The whole back office — for free.

The same jobs your team does every week, in one private app your church actually owns.

Groups & community

Small groups, prayer, chat and announcements — private to your church.

Serving & rotas

Teams, roles and sign-ups — who's on this week, and who's still needed.

Calendar & events

Services, meetings and events with RSVP — one shared church diary.

Giving & statements

Treasurer's tools, fund tracking and year-end statements — kept private.

Safeguarding

Child protection built in and enforced — leaders stay in control.

Directory & care

A member directory, pastoral care and meal trains for when life is hard.

Plus a whole offline **Bible** and sermon library — the parts admin software leaves out.

— THE DIFFERENCE

Private, self-hosted, and free — for good.

Same everyday work; none of the rent, and none of the lock-in.

- ✓ **No per-member fee, ever.** Grow from two hundred to twenty thousand without a bigger bill — cost is a hardware question, not a headcount one.
- ✓ **Your data stays yours.** It lives on your own hardware, not a vendor's cloud. No one mines it, sells it, or can lock you out of it.
- ✓ **Open-source, walk away anytime.** Export everything; no ransom, no “free trial that ends.” Free is the model.
- ✓ **Your brand, your rules.** Church-branded invites, statements and calendars, your policies — it looks like your church, not a SaaS login.

— THE BONUS ONLY A STRONG CHURCH CAN GIVE

Turn your church's strength into someone else's shelter.

Because it's all one open network, a well-resourced church can run a **public node** — quietly hosting infrastructure for believers who can't safely run their own.

Carry the weight, not the secrets

You provide the servers and bear the cost. You never hold their keys or see what's inside — so you can't be the door that's forced open.

Mission from your server room

Spare capacity you already pay for becomes real shelter for the persecuted church — a new front line that needs no visas or flights.

The body, sharing its strength

The church that has much, quietly resourcing the church that has little — across borders no government controls.

“Your abundance at the present time should supply their need.” — 2 Corinthians 8:14

Bring your church home.

Try it alongside what you have

Run TrinityOne next to your current tools, at no cost. Move your church over whenever you're ready — and cancel a subscription for good.

Run a node for the persecuted church

Put your church's resources to work as shelter for believers who have none. We'll help you set it up.
